

Chiavari, 1st February 2011

PRESS REALEASE - NAVIMETEO AT SEATEC Navimeteosat: The Weather Expert Onboard

The company Navimeteo provides a set of personalized marine weather services to yachtsman and professionals, basing its services from the tower of Chiavari marina.

Fifty marinas have also chosen to use the modern NavimeteoHarbour system, appropriately devised for them.

Navimeteo Weather Forecasters would like to take the opportunity of the 9th Seatec to show all modern developments and technologies in weather forecasting, weather routing and warnings. Navimeteo stand is 419, located in area B.

About 800 units are serviced, among yachts and ships for leisure yachting, providing a constantly updated and personalised weather monitoring along the routes of the Mediterranean Sea and the oceans.

As a reference of this operational approach of ours, based on direct telephone communication and supported by the use of the innovative Navimeteosat system, we wish to mention Andrea Mura in particular, the 2010 winner of the Route du Rhum.

We also serviced Sergio Davì on the raid Palermo-Amsterdam and Andrea Stella on his E-W Atlantic crossing from La Spezia to Martinica last month on board of Spirito di Stella, a catamaran "without architectural barriers".

Different routes with different types of boats, but with a common requirement for the captain/skipper, i.e. to always be looked after and reassured, counting on an accurate and timely weather information service.

The weather expert remains the heart of all Navimeteo operational activities as he can provide his reasoning and experience, finding support from model analysis and updated weather data.

NAVIGATION AND METEOROLOGY: NAVIMETEOSAT AND WEATHER ROUTING will be presented on Friday 18th February in area events B at 11-12.30
